

How to Install Docker on Windows

How to Download & Install Docker Desktop on Windows

1. Ensure your system meets requirements: Windows 10/11 64-bit (build 22H2+), 4 GB RAM, WSL 2 or Hyper V enabled.
2. Download Docker Desktop from the official Docker website.
3. Run the installer, check "Enable WSL 2 integration" and optionally Hyper V, then proceed.
4. Restart your PC after installation.
5. Open Docker Desktop, agree to the terms, and run the onboarding tutorial.
6. In PowerShell/Command Prompt, verify with:

```
docker --version
```

```
docker-compose --version
```
